Cairo, Egypt — Military Status: Exempted

Summary

Software Engineer specializing in Mobile development, focusing on architecting scalable, offline-first applications. By leveraging Clean Architecture and modern UI frameworks, I build robust mobile solutions designed to deliver seamless user experiences and tangible business impact.

Education

Information Technology Institute

Oct 2025 – Present

9-Month Diploma — Mobile Applications Development (Native), ITI Hybrid

Mansoura University

Sep 2021 – May 2025

B.Sc Degree in Computer Science

Mansoura, Egypt

- **Core Coursework:** Data Structures & Algorithms, Software Engineering, Database Systems, Operating Systems, Computer Networks, Artificial Intelligence, and Machine Learning.
- **Graduation Project (ArchivAI):** Developed an AI-powered document management system handling complex backend integration and mobile architecture. Secured **2nd Place** at both the Nile University UGRF and the national Creativa Hackathon.

Internships

Paymob

Hybrid

Android Engineer Intern

July 2026

- Joined the **Android POS** team at Paymob, a leading fintech payment gateway offering POS devices, a Soft POS mobile app, and web integrations, serving **nearly 10M users** across numerous partner companies.
- Work within a **multi-module** POS codebase alongside the team in a hybrid model, attending daily stand-up meetings and contributing **unit tests** to improve code reliability.

The Chance

Remote

Android Engineer Intern

April 2025 – Nov 2025

- **Agile Squad Development:** Operated within a fast-paced, 8-month simulated enterprise environment, utilizing Agile methodologies, daily stand-ups, and sprint cycles to build and ship collaborative squad projects.
- **Multi-Module Clean Architecture:** Architected robust applications utilizing strict Clean Architecture and multi-module project structures, while establishing CI/CD pipelines via GitHub Actions to ensure code maintainability.
- **Modern UI & Multiplatform:** Developed highly responsive user interfaces using Kotlin, Jetpack Compose, and Compose Multiplatform (CMP), while managing complex API integrations and state management.

Projects

AI Mahir

[GitHub](#)

- A large-scale **Kotlin-first** app (Ktor, Koin, Nav3) helping users worldwide memorize and recite the Quran, built by dedicated Android, iOS, backend, AI, and testing teams — featuring an interactive Mushaf and Quran audio playback.
- Collaborated with the **AI team** to build a recitation-practice feature that detects and classifies different types of recitation mistakes in real time.
- Building **subscription and payment** flows with the backend team, enabling users to subscribe to sheikhs for live streaming sessions and join study circles (Maqra'ah).

Carto

[GitHub](#)

- **1st Place, JETS MobileX Challenge (ITI)** — a fully functional native e-commerce app for fashion shopping with Shopify catalog integration, AI shopping assistant, wishlist, cart, and map-based address selection.
- Built with **feature-based Clean Architecture** across isolated modules, using Kotlin, Jetpack Compose, Hilt, Retrofit/GraphQL, Room, DataStore, and Coroutines/Flow for a scalable, testable codebase.
- Delivered a polished **light/dark** theme experience with reactive state management flowing end-to-end from ViewModel to Compose UI.

Atmos

[GitHub](#)

- Offline-first Android weather app (**Kotlin, Jetpack Compose**) delivering real-time current, hourly, and daily forecasts via **Room Database** caching.

- Engineered a custom **Danger Alerting System** using **AlarmManager** that bypasses Doze mode and triggers full-screen alarms on severe weather thresholds, even when the app is closed.
- Architected with **Clean Architecture + MVVM, Koin, Retrofit/OkHttp, DataStore, and WorkManager**.

ArchivAI

GitHub

- Android companion to an AI-powered Electronic Document Management System (EDMS) for secure document access, management, and search — built with **Kotlin** and **Jetpack Compose**.
- Features **AI-powered intelligent search**, secure Retrofit-backed authentication, and real-time push notifications; built with **MVVM** and **Hilt**.
- Secured **2nd Place** at both the Nile University UGRF and the national Creativa Hackathon, earning a 20,000 EGP prize.

Movio

GitHub

- **Squad-built** movie/TV discovery platform (TMDb API) with **Jetpack Compose** and **multi-module Clean Architecture**, including a Library screen with lists, favorites, and watch history — powered by **Dagger/Hilt, Room, and Firebase**.

EvolveFit

GitHub

- **Squad-built** cross-platform fitness tracker using **Kotlin Multiplatform (KMP)** and **Compose Multiplatform**, sharing logic and UI across Android/iOS with **Koin, Ktor, and Room**.

BiteWise

GitHub

- Culinary companion built with **Native Android (Java)** and **MVP**: recipe discovery, Weekly Meal Planner, offline-first **Room** caching, and **Google Sign-In/Firebase Auth** cloud sync, backed by **RxJava3** and **WorkManager**.

Technical Skills

Programming Languages: Kotlin, Java, C++
Android Development: Android SDK, Jetpack Compose, XML, RX Java, Coroutines, Flow API, Retrofit, Firebase, WorkManager, Navigation Component, ViewModel, LiveData
Software Architecture: MVVM, MVP, MVI, Clean Architecture, Dependency Injection, Modular Design, SOLID Principles, Design Patterns
Libraries & Frameworks: Retrofit, Ktor, Koin, Hilt, Jetpack Compose, Coil, Glide
Development Tools: Git, GitHub, Postman, Figma, JIRA, Firebase Console, Google Play Console
CI/CD & DevOps: GitHub Actions, Continuous Integration, Continuous Deployment, Automated Testing
Testing: JUnit, Unit Testing, Test-Driven Development
Database Technologies: Room Database, SQLite, Firebase Realtime Database, Cloud Firestore
API Technologies: RESTful APIs, JSON, XML
Cloud Services: Firebase Authentication, Cloud Functions, Cloud Storage, Cloud Messaging

Achievements

1st Place — JETS MobileX Challenge <i>Information Technology Institute (ITI)</i>	2026
ECPC Finalist <i>Egyptian Collegiate Programming Contest</i>	2025
Nile University UGRF — 2nd Place <i>Computer Science Track — Awarded \$300 prize</i>	2025
Creativa Hackathon — 2nd Place <i>Awarded 20,000 EGP prize among 50+ competing teams for developing ArchivAI</i>	2024
